

ABSTRACT

Device for placement of stuffing into a desired food item. Said device comprised of two components. A rollable and unrollable substantially flat sheet having capacity to enclose stuffing in a cylindrical fashion. Being of such length and width to as to contain said stuffing therein. A rod of cylindrical form which shall be of an outside diameter closely equal to the inside diameter of the cylinder enclosing the stuffing within. Said rod would be of a sturdiness so as not to bend intolerably whilst transferring said stuffing encased in said cylinder into food item chosen to receive product.
